Derwent Abstract

DERWENT RECORD

(DE29713335U) The endoscopic instrument consists of a trocar-like sleeve shaft (4) with a conical point (5). The shaft has a handle section and an operating mechanism which acts at the distal end. The shaft has a circumferential groove-like neck section (7) for accepting the expandable end (9) of a vessel prosthesis (2) which slides onto the shaft.

The prosthesis is intended to be inserted into the side wall of an artery (3). Several C-shaped clamps (11) are provided in close proximity to each other which are operated by a clamp closer (16) mounted in the neck area of the shaft.

USE/Advantage - Surgical instrument joins prosthesis to artery without requiring open surgery procedure.
